Professional Summary

Experienced IT developer with **6.7+ years** as a Java developer Involved in the design, development, and testing of Client-Server, Web Applications using Java/J2EE Technologies.

- Experienced in Web based application development using **Java/JEE, JSP, Servlets, JDBC, Hibernate, Web Services, XML, Spring, SpringBoot and MicroServices.**
- Experience in SDLC that includes Requirements Analysis, Design, Coding, Testing, Implementation, and Maintenance with methodologies like Waterfall Model and Agile Methodology.
- Experience in design and development of web-based applications testing of Client-Server, Web Applications using **Java/J2EE Technologies.**
- Frontend Experience using JSP, JSTL, HTML, CSS, JavaScript, jQuery, Ajax, Bootstrap, Angular 6 for FrontEnd UI development.
- Experience in creating test cases using **JUnit** and **Mockito**
- Strong knowledge on databases like **MySQL, Oracle.**
- Developed new features, maintained, Unit-Tested and deployed MiddleTier WebService Apps into Production then monitored and provided post install support to upstream clients
- Automated OLAP Connections switch - using Java and Selenium.
- Performed root cause analysis for several critical production issues and fixed them for another production install.
- Prepared detailed Endpoints document and flow diagrams for tracking and Pickup APIs.
- Partnered with InfoSec, FireWall, DevSecOps teams for many times during Development and Production install activities.
- Involved in several design and architectural discussions for new Features development and provided solutions to existing problems.
- Actively helping out other teammates to complete Sprint Stories on time.
- Worked on WebLogic Version upgrades, Applications migration to Java 8, and also on Servers instances expansion.

Projects

Company : *Mphasis Technologies, Hyderabad / Aug 2021 - Present*

Pickup & Delivery development

About: Develop Client user Portal for placing pickups and tracking deliveries in First and Last mile connect.

Role : **Java FullStack Developer**

Responsibilities:

- Developed and written test cases for backend rest endpoints and helped front end UI defect fixes up to production rollout.
- As a backend developer, I need to take care of issues/new_Dev. In line

Technical Skills

Web application Tools

- Java/JEE
- JSP
- Angular 7
- ReactJS
- Servlets
- JDBC
- Hibernate
- Web Services
- XML
- Spring
- SpringBoot
- MicroServices
- JMS
- Kafka Messaging
- AWS
- Azure

Frontend Technologies

- HTML
- CSS
- JavaScript
- JQuery
- AJAX
- JSON

Unit test cases

- Junit
- Mockito.

Databases

- DB2
- MySQL
- Oracle
- MongoDB
- Apache Cassandra

Project methodologies

- Waterfall
- Agile
- SAFe Agile
- XP

with upStream clients as well as keep the App compatible with downstream systems, alongside modernizing initiatives taken up at Client's Enterprise level.

- Developed new features, maintained, Unit-Tested and deployed MiddleTier WebService Apps into Production then monitored and provided post install support to upstream clients.
- Strong analytical, interpersonal and communications skills. Demonstrated track record of analyzing situations, and implemented critical solutions.

Technology Stack: Java 8, Angular 7, AWS, Spring REST, Hibernate, Spring Data JPA, DB2, Angular 7, HTML 5, CSS, JavaScript, Postman, PCF Environment.

Company : *Wipro Technologies, Hyderabad / June 2017 – Aug 2021*

Ground Business Rules Service Development and Production Support

About: Develop new feature enhancements and re-modify existing architecture to meet business needs in Production.

Role : **Java Backend Developer**

Responsibilities:

- As a senior developer, I need to fix defects, performance issues, also work on new feature enhancements and support critical production issues.
- Performed root cause analysis for several critical production issues and fixed them for another production install.
- Experienced on messaging service implementation using JMS and IBM MQ and Created JMS interfaces to replace existing IBM MQ MIIG interfaces.
- Created REST WebService to directly communicate with App server, and that eliminated an existing legacy XML translating Servers Cluster.
- Worked on Building Jenkins PipeLines for deployments into Unix machines and WebLogic Servers.

Technology Stack: Java 8 , Azure, Spring, JMS, Weblogic Server, REST APIs, SOAP UI, Ready API, Postman, gitlab, OAuth2, JSP-Servlets, IBM-MQ, Splunk, AppDynamics.

Messaging modernization to MaaS

About: Move existing Messaging flow to Cloud Infrastructure without business downtime.

Roles : **Java Backend Developer**

Responsibilities:

- As a senior developer, I need to identify and migrate existing messaging applications flows to Cloud On-Premise infrastructure.
- Experienced on messaging service implementation using JMS and IBM MQ and Created JMS interfaces to replace existing IBM MQ MIIG interfaces.
- Created REST WebService to directly communicate with App server, and that eliminated an existing legacy XML translating Servers Cluster.
- Worked in SQL and experienced in RDBMS like DB2 and MySQL.

Technology Stack: Ready API, JMS, IBM-MQ, SOAP-UI, Oracle, DB2.

Others

- DevSecOps
- Github
- XML
- Subversion
- Maven2
- JUnit5
- UML
- WinScp
- PCF
- Apache CXF
- Xhtml
- IBM Web Sphere
- WebLogic
- Selenium WebDriver
- WebService Interface
- SyBase DB.
- SAP-Java Web DynPro
- Angular 6, 7, 8
- Spring REST
- Spring Data JPA
- Postman
- PCF Environment
- OAuth2
- Splunk
- AppDynamics.
- SOAP UI
- Ready API
- IBM-MQ
- Jenkins
- CRM Tool

Education

**B.Tech. from GITAM DEEMED
UNIVERSITY – 7.88 GPA
2016**

Modernization of Legacy Apps

About: Re-architect and modernize existing business solutions to new Event-driven microservices architecture.

Role : Java Backend Developer

Responsibilities:

- As a senior developer, I need to gather information from legacy apps and work with Architects to plan future modernization roadmaps and implement them from scratch level.
- Worked on WebLogic Version upgrades, Applications migration to Java 8, and also on Servers instances expansion.
- Worked on Building Jenkins PipeLines for deployments into Unix machines and WebLogic Servers.
- Worked in SQL and experienced in RDBMS like DB2 and MySQL.
- Experienced in creating Unit test cases by using Junit & Mockito.
- Experienced on messaging service implementation using JMS and IBM MQ and Created JMS interfaces to replace existing IBM MQ MIIG interfaces.

Technology Stack: DataStax Cassandra , DB2, Oracle, Junit5, Mockito, Java 8, Java 11, JMS, Springboot, PCF, github, Jenkins, ReadyAPI, Postman.

Migration project

About: Worked on a migration project involved with moving existing On-Premise systems to AWS cloud infrastructure.

Role : Java Developer

Responsibilities:

- Implemented BCM (Business Continuity Management) solution from UI side, helps switching to BCM site incase of any disaster.
- Automated OLAP Connections switch - using Java and Selenium.
- Frontend Experience using JSP, JSTL, HTML, CSS, JavaScript, jQuery, Ajax, Bootstrap, Angular 6 for FrontEnd UI development.

Technology Stack: SAP-Java Web DynPro, Fiori, HTML5, CSS3, JavaScript, Angular 6, 7, Java 8, Selenium WebDriver, WebService Interface, SyBase DB.

Company : IIRPL, Mohali / May 2016 – May 2017

Customer Rewards Tool Development & Support

About: Develop, maintain and release changes for Client Website.

Role: Software Developer

Responsibilities:

- Had to retrieve and update CRM Data into DB from spreadsheet.
- Develop, maintain and release changes for Client Websites.

Technology Stack: CRM tool, HTML 5, CSS, JavaScript, Excel, MySQL
